Filename: microsoft-ms101-3-2-1-plan-app-deployment
ShowName: Microsoft 365 Mobility and Security
SubTitle: Exam MS-101
Topic: Plan for Devices and Apps
EpisodeName: Plan App Deployment
Description: Adam and Wes discuss how to plan for app deployments using Intune.

Plan App Deployment

Implement Modern Device Services (30-35%)

Plan for Devices and Apps
• Create and Configure Microsoft Store for Business
• Plan App Deployment
• Plan Device Co-management
• Plan Device Monitoring
• Plan for Device Profiles
• Plan for Mobile Application Management
• Plan Mobile Device Security

==========

Plan App Deployment

Some thing to be aware of before we get started:

1. You can deploy apps via the Microsoft Store
2. You can deploy apps via Intune
3. The Microsoft store ONLY supports Windows 10 devices
4. Intune supports Android, iOS, macOS as well as Windows 8.1 & 10

What app types are supported by Intune?

Store App - Android, iOS, Windows phone 8.1

ALL store apps require an app store URL pointing to the app provider. Microsoft Store for Business synchs apps once every 24 hours with Intune.

Office 365 Suite - Windows 10, macOS

Can be bundled together or deployed individually

Web Link - allows you to create an app that launches a browser session to a specified URL, such as a company portal.

Line-of-business (LOB) - Allows you to upload and deploy in-house developed apps. File formats include:

```
.msi
.msix
.msixbundle
.appx
.appxbundle
```

Windows app (Win32) - Allows you to upload a repackaged app that uses the .intunewin format

Add apps to Microsoft Intune:
https://docs.microsoft.com/en-us/intune/apps/apps-add

Let's get busy ...

```
Add an app
Assign an app
```
